

Granite Sink: Care & Maintenance

Granite Composite sinks primarily consists of 80% Quartzite and 20% acrylic. Quartzite is used to make the sinks more durable and less vulnerable to scratching and staining, while the acrylic acts as a natural sound dampener, eliminating the need for sound reduction pads. The sinks are also able to withstand temperatures up to 550 degrees. It is available in various colors and styles.

Damage

- Do not store heavy or very sharp objects above your granite sink. If they fall, they can scratch or chip the sink. A chipped or cracked granite sink can be very difficult and costly to repair or replace.

Basic Cleaning

- To remove everyday stains, clean the surface with a soft cloth or sponge and a mild dish washing detergent.
- More stubborn stains can be removed by using a mild abrasive cleaner such as Ajax .

Mineral Deposits

- Mineral deposits can be removed by using a weak solution of vinegar and water. Rinse thoroughly

Tough Stains

- If a tough stain has become ingrained in the bowl, mix a solution of 40 parts water to 1 part bleach and let this stand in the sink overnight. Then drain and rinse thoroughly. This process is only for extreme circumstances and should not be used regularly.

Helpful Hint

- Rinse and dry your sink after each use to avoid mineral deposit buildups
